

Full Stack Developer · AI-Integrated Products · API & Automation

Boluwatife Gbadamosi

Lagos State, Nigeria · +234 901 735 4580 · gbadamosiboluwatife2002@gmail.com · [LinkedIn](#)

Professional Summary

Full stack developer who builds complete products end-to-end: React frontends, backend APIs, database design, and, increasingly, the AI-agent and automation layer that sits on top. Comfortable owning a product from schema design through to a working, integrated AI feature (LangChain/LangGraph agents, embeddings, vector search). Experienced with webhook-driven automation and third-party API integration (Notion, WhatsApp), which maps directly onto funnel, license, and notification-style integrations. Learns fast, ships independently, and is comfortable picking up new stacks (currently deepening Node.js and relational/NoSQL database work) to fit what a product needs.

Technical Skills

Frontend: HTML5, CSS3, JavaScript (ES6+), React, Tailwind CSS, responsive/mobile-first design, component architecture (Context API, Zustand)

Backend: Python, Node.js (building), RESTful API design and third-party API integration, JWT and OAuth2 bearer token authentication

Databases: PostgreSQL (via Supabase), SQL migrations, Row-Level Security (RLS) policies, schema design

AI / LLM Integration: LangChain, LangGraph (agentic workflows, persisted conversation memory), embeddings and vector search with FAISS, AI engine integration into product features

Automation & Integrations: Webhook-driven automation, Notion API, WhatsApp messaging integration

Tools: Git, Vercel

Currently building toward: Linux server management (VPS/cPanel), Docker, CI/CD

Products & Projects

Recto AI — AI Design Generation App

2025

[rectoAI's website](#)

- **Full stack build:** Built the React frontend and the backend APIs powering document upload, query handling, and result delivery.
- **AI product feature:** Integrated the AI engine that generates visual designs from user input, plus LangGraph for agentic, memory-persisted conversations.

Portfolio Website

2025

[www.boluscript.dev](#)

- Personal portfolio showcasing projects, technical skills, and project write-ups.

Opportunity Automation System

2026

Headless automation tool: no custom UI, API and script-driven

- **Third-party API integration:** Monitors a Notion database via the Notion API and triggers workflows on new records — the same integration pattern used for license/notification systems.
- **Webhook handling:** Sends scheduled WhatsApp reminders and listens for reply webhooks to update record status automatically.
- **AI agent:** Uses an AI web agent to inspect and report on application forms without submitting them.

4Runins — Artisan-Client Marketplace Platform

2025

Marketplace connecting clients with artisans; clients review artisans' work, artisans find clients seeking a service · [GitHub repo](#)

- **Full stack build:** Built with Next.js and Supabase as part of a two-person team, covering both frontend and backend.
- **Database & security:** Wrote backend endpoints, SQL migrations, and Row-Level Security (RLS) policies; designed the Supabase schema and used the Supabase CLI for migrations.
- **Auth architecture:** Implemented Next.js SSR authentication.

Trade Square — Backend & Authentication (In Progress)

2026 — ongoing

[TradeSquare Github repo](#)

[TradeSquare Project Link](#)

Trading platform; frontend already shipped, currently building out the backend

- **Authentication:** Building backend authentication using JWT and OAuth2 bearer tokens.
- **Scripting:** Using Python scripts to support backend and data-handling tasks.

Cliniq Flow — Healthcare Workflow Platform

2025

[Cliniq Flow website](#)

- **Backend development:** Wrote the backend integration for the platform, including all API endpoints powering patient records, appointment data, and dashboard views.

NELFUND AI — Student Loan Information Chatbot

2025

[Live site](#)

- **Data pipeline:** Implemented document ingestion, chunking, embeddings, and vector search using **FAISS**.
- **Retrieval logic:** Designed prompt and retrieval logic to reduce hallucinations and improve factual accuracy.

AI Developer Internship — Chatbot-Integrated Static Website

2025

First project as an AI developer intern; not currently live · [GitHub repo](#)

- **Backend / AI integration:** Built the backend logic connecting the site to an AI service to power an embedded chatbot.
- **Frontend:** Also built the static frontend the chatbot was embedded into.

Training

Publica AI — Abeokuta Training Hub

Abeokuta

Project-based software engineering training

- Version control, modular architecture, and API-driven development, within structured project scopes and iterative feedback cycles.
